

Empowering people to solve problems together

Xrathus, Inc. delivers the Xrathus DXP™, a cloud-native execution platform that helps mission-driven teams move from complex problem statements to tangible deliverables for innovation programs across industries. Unlike idea portals or siloed collaboration tools, the cloud-native Xrathus DXP uses a project-embedded model that puts collaboration, workspaces, and training & upskilling directly inside each project—so teams move from asynchronous ideation to real-time problem solving without handoffs. Founded in 2019 and led by Rekha Patel, an innovation visionary with 30 years of cross-sector expertise spanning geological exploration, digital transformation, strategic collaboration and business leadership. Patent Pending.

### Core Competencies

- **Crowd-Based Innovation Programs:** Open, hybrid and private projects supporting crowdsourcing, freelancing and micro-tasking.
- **Execution Platform:** Collaboration and workspaces embedded directly in each project to maintain momentum and accelerate results.
- **Software & Data Solutions:** prototypes, workflows, machine learning and AI models, algorithms, application development support.
- **Program Design & Expert Services:** phased projects, workshops, briefs.
- **Technology Search & Landscape Analysis:** scans to support technology evaluation and selection.
- **Embedded ecosystem partner resources:** Curated courses, toolkits, and learning modules enabling end-users to upskill or learn new technologies

### Differentiators

- **Project auto-orchestration** — create a project and Xrathus DXP stands up the working environment (collaboration, data science workspaces, training & upskilling) so teams start the same day instead of waiting on setup.
- **Single source of truth for reviews** — conversations, files, versions, and an auditable decision trail are tethered to the deliverable and phase, so reviewers see what changed, why, and by whom.
- **Fewer handoffs by design** — collaboration lives inside the project across the continuum from asynchronous ideation to real-time working sessions, which cuts context switching and rework.
- **Open-to-restricted in one program** — run a public challenge, down-select, then continue in private, gated sprints without switching platforms, keeping continuity and control.
- **Compliance-ready outputs** — role-based access, tracked versions, and structured deliverable packages make oversight and records review-ready without extra assembly.

### Past Performance

Validating Xrathus DXP™ through real-world innovation programs.

### Company Snapshot

**Established:** 2019

**CAGE:** 9VUG8

**UEI:** VR9XJ9BHUVJ3

**NAICS:** 541511, 541512, 541519, 541715, 541690

### Certifications

**WOSB**

**Small Business**

### Awards & Recognition

- Qualified to participate in NASA's NOIS3 RFP (2024).
- Top 10 Collaboration Solutions Provider — CIO Applications (2023).
- Top 50 Tech Leaders — Intercon Global Conference (2021).
